

Health & Healthcare Disparities in HIV in the US

The technology for this event is jointly provided by Cisco and METI

“Blacks are the most affected ethnic group with a lifetime HIV risk of 1 in 22 for men and 1 in 54 for women.” - Hess KL, et al. Ann Epidemiol. 2017;27(4):238–243.

The first step towards eliminating disparities of HIV in our communities is education.

This lecture is a journey on HIV and disparities in communities of color with a focus on ways we can bridge the gap.
